

**NEW!** Korg nanoSERIES USB Powered Slim-line Controllers

*Meet the most compact family of USB-MIDI controllers ever!*

So small you can put them on your workstation, in front of your laptop, on a recording console or anywhere else you need versatile control over your DAW, virtual instrument/effect or DJ software.

The nanoPAD features 12 excellent feeling and highly responsive pads in a new, smaller footprint. Chord Trigger function lets you enter chords onto a single pad, helping you to make the most of the work surface as you create.

**nanoPAD \$59<sup>99</sup>**

Nine faders, nine knobs, 18 switches and a full transport section. For each of the four programmable scenes the nanoKONTROL offers, you can set the controllers any way you need them. That means that you can transmit a total of 168 different MIDI CC Control Change messages, as well as MIDI notes with the switches.

**nanoKONTROL \$59<sup>99</sup>**

The nanoKEY will transmit your playing dynamics to your software accurately and expressively. In CC (Control Change) MODE, the keys become MIDI controllers, allowing you to control any MIDI assignable parameters within your software.
